

ABSTRACT OF THE DISCLOSURE

A resilient element includes interconnected lower and upper parts. The lower part includes a planar bottom segment having front and rear ends, a first curved segment that curves upwardly and rearwardly from the front end of the planar bottom segment, and a second curved segment that curves upwardly and forwardly from the rear end of the planar bottom segment. The upper part includes a planar top portion having front and rear ends, a first curved portion that curves downwardly and rearwardly from the front end of the planar top portion, and a second curved portion that curves downwardly and forwardly from the rear end of the planar top portion. The first curved segment and the second curved portion have interconnected distal ends.
